

model SP157B

Emergency Equipment Parts and Accessories

FEATURES & BENEFITS

SCALD PROTECTION

Protects an emergency shower and/or eyewash from water temperatures that can exceed 95° F (35° C) by bleeding off the excessively warm fluid.

OPTIONS

SPECIFICATIONS

Model SP157B, fully engineered scald protection valve is constructed of a one piece brass body, and supplied with a removable cartridge for easy cleaning and maintenance. Automatic thermal actuator bleed valve opens when internal water temperature exceeds 95° F (35° C) and closes when water temperature falls below 87° F (30° C). 1/2" NPTF inlet and outlet.

APPLICATIONS

Specifically, SP157B is suitable for emergency applications, or other plumbing situations where scalding water temperature protection is needed or required. Can be used in conjunction with most Haws shower and/or eyewash units.
